

NTT Ltd. and Palo Alto Networks

Together, we enable a secure and connected future

We've created a secure access ecosystem that delivers comprehensive, automated security across head offices, branches and remote workers.

Security has become a critical enabler as organisations across the world transform through digital. There has been a dramatic shift in the way we work, how we work, and where we work, with business leaders beginning to fully embrace the mobile worker and cloud-based strategies.

Business outcomes are tied to security

Security remains a continuous and valid concern as businesses adapt to the 'new normal' and recognise the threat landscape is continuously changing.

IT and Security Professionals are challenged with how to enable business transformation, while minimising risk.

We commonly hear three priority questions from security professionals:

1. How do I secure an increasing number of remote workers, the data and assets they connect to and share, the applications they use, and the channels they use to communicate without hindering productivity?

2. How do I connect my offices – branches and headquarters (HQ) – to the cloud, without sacrificing security, as well as network flexibility and speed?
3. I have limited security manpower. How can I maximise their impact and effectiveness against an increasing number of threats and vulnerabilities?

How NTT Ltd. and Palo Alto Networks can help

Together, we have created a secure access ecosystem and modernised security operations solution that delivers comprehensive and automated security solutions across head offices, branches and mobile workers, in line with your business objectives.

Our solution brings together:

- NTT Ltd.'s intelligence-driven security services and secure by design approach.
- Palo Alto Networks industry-leading technology.
- A combined pool of global security experts.

Complexities faced by IT and security professionals

- **79% of organisations** are planning for **increased remote working** to some extent, with the majority (51%) being highly committed to the approach.*
- Nearly **five in six organisations** (83%) completely **re-thought their IT security** to accommodate new ways of working brought about by the pandemic, according to recent research.**
- NTT's Global Threat Intelligence Report 2021 found that more than **67% of all cyber attacks were remote access**: either web-application (32%) or application specific (35%).
- **Protecting cloud services** is the top cybersecurity focus for the next 18 months.***

NTT Ltd. and Palo Alto Networks Secure Access Ecosystem

How it all comes together

Together, NTT Ltd. and Palo Alto Networks have created a secure access ecosystem delivers the following:

Priority area	Desired outcomes	How it comes together
Intelligent Workplace (Secure Employee)	Security for the remote worker, including access to applications and data from any location.	NTT Ltd.'s Security Consulting Services + NTT Ltd.'s Managed Security Services + Palo Alto Networks Strata Prisma Cortex
Intelligent Infrastructure (Secure Branch)	Secure connection between branch, head office, the internet, and the cloud.	
Intelligent Cybersecurity (Secure Operations)	A more efficient, automated, and intelligence-driven security operations center.	

About NTT Ltd.

- 7 Global R&D Centers
- More than USD 100 million invested in cybersecurity R&D and innovation
- More than 9.5TB of security data analysed daily
- More than 2,000 security specialists
- Cross-technology architectures to ensure clients are secure by design
- NTT Gartner networking

About Palo Alto Networks

- 85 of the Fortune 500 and 63% of the Global 2000 rely on Palo Alto Networks
- Ranked a leader in Gartner Magic Quadrant for Enterprise Network
- 62,000 customers in 150+ countries
- Experienced team of more than 5,100 employees worldwide

NTT and Palo Alto Network can provide your business enterprise grade security for a secure branch, user and network through the below solution bundle offerings.

Use Case	Subscription	Solution Sets		
		Strata (Machine-Learning based Next Generation Firewalls)	Prisma (Secure Access)	Cortex (Extended Detection and Response)
Web Security	Advanced URL Filtering (AURL-F)	✓	✓	
	DNS Security	✓	✓	
Network Security	Threat Prevention (TP)	✓	✓*	
	Wildfire (WF)	✓	✓*	
Extended Detection & Response	XDR Prevent			✓
SD-WAN	SD-WAN	✓*		
Advanced Segmentation	IoT Security (DRDL)	✓*	✓*	
CASB at the branch	SaaS Security Inline	✓*		

✓* Available as an add-on

From keeping your employees secure to protecting your business operations, **we've got a solution bundle that'll suit your organisation.**

**So what solution bundle suits you?
